

Shutter Motorisation

Control a single shutter, a room of shutters or every shutter in the house via the convenient remote or an Apple mobile device.

The Auto-Brake feature automatically stops the motor if an obstruction is detected to prevent injury, especially for young children and pets.

Each moisture-resistant motor module is powered by rechargeable lithium-ion batteries and can last up until a year on a single charge.

An integrated solar panel extends the battery charge.

Automate the shutters to a personalised schedule, security mode so they move while away on holidays or with the movements of the sun.
